

# CPLA CUTLERY COLLECTION

Want compostable cutlery but don't want to sacrifice quality and durability? Look no further! Our cutlery is made from a corn based resin that is sturdier than other types of plant starch, while remaining commercially compostable.

- Durability Made for High Heat Tolerance
- Pearlescent surface heat-resistant up to 185°F
- CPLA material can be completely composted in a commercial composting facility in as little as 60-90 days
- PLA wrapper is also compostable
- Available in white or black, medium or heavy

Our commercially compostable cutlery and its wrapping are made from PLA, a corn-based bioplastic. They can be properly disposed of at commercial composting facilities where they will break down into soil and the key nutrients our food needs to thrive.

### Did you know?

It is estimated that close to 40 billion individual plastic utensils—meaning 14 and 18 billion plastic spoons—are produced each year. With such low rates of reuse and recycling in the United States, much ends up in our rivers and oceans as plastic pollution.
